

Munira Hassan

Junior Software Engineer | Full Stack Developer

Nairobi, Kenya | +254792854176 | hassanmunira30@gmail.com | www.linkedin.com/in/munira-hassan-a271b3417 | github.com/munirasheikh-rgb

PROFESSIONAL SUMMARY

Junior Software Engineer and Full Stack Developer with practical experience delivering responsive web interfaces, secure backend services, and database-backed applications. Builds frontend features with React, Next.js, JavaScript, Tailwind CSS, and reusable component patterns, and develops RESTful APIs with Python, Flask, Flask-RESTful, SQLAlchemy, Marshmallow, and relational databases. Able to translate product requirements into clear user flows, data models, API contracts, validation rules, and maintainable application structure.

Capable of delivering authenticated CRUD systems, JWT-protected routes, role-based workflows, third-party API integrations, payment-status flows, pagination, search, database migrations, seed data, and automated tests. Comfortable troubleshooting frontend rendering, CORS, authentication, imports, migrations, and API responses; testing endpoints with Postman; and preparing applications for environment-based configuration and GitHub-connected deployment workflows. Through projects in fleet remittance, hotspot billing, productivity, fitness, and inventory management, has demonstrated collaborative Git/GitHub development, feature-branch ownership, pull requests, merge-conflict resolution, technical presentation, and an ability to take features from planning through implementation and verification.

TECHNICAL SKILLS

- **Languages:** JavaScript, Python, HTML5, CSS3, SQL
- **Frontend:** React, Next.js, Vite, React Router, Context API, Tailwind CSS, Bootstrap, Semantic UI, responsive UI development
- **Backend:** Flask, Flask-RESTful, REST API design, JWT authentication, SQLAlchemy, Marshmallow, Flask-Migrate, Alembic
- **Databases:** SQLite, relational data modelling, foreign keys, joins, constraints, seeding, migrations
- **Testing:** pytest, unittest.mock, Vitest, React Testing Library, API endpoint and component testing
- **Tools and Workflow:** Git, GitHub, VS Code, Postman, npm, Homebrew, CLI development, branch-based collaboration, pull requests and merge-conflict resolution
- **Deployment and Configuration:** Vercel deployment fundamentals, production build workflows, environment variables, GitHub-connected deployments, and frontend/API configuration
- **Core Knowledge:** Object-oriented programming, asynchronous JavaScript, promises, fetch/axios, callbacks, higher-order functions, recursion, binary search, Big-O fundamentals

SELECTED SOFTWARE ENGINEERING PROJECTS

FleetPesa | Full Stack Fleet Remittance Platform

React, Vite, Tailwind CSS, Flask, SQLAlchemy, Marshmallow, JWT

- Contributed to a team-built fleet management platform that helps owners track driver remittances, vehicle assignments, payment shortfalls, and operational activity.
- Designed and implemented driver-to-vehicle assignment functionality with ownership checks, duplicate-assignment protection, active assignment filtering, and an unassignment workflow with timestamps.
- Built RESTful driver and assignment endpoints backed by the users table, role-based validation, JWT-protected access, serialization, and database migrations.
- Connected frontend assignment flows to centralized Axios API utilities with token handling; developed vehicle search, pagination, owner alerts, status badges, and payment-processing states.
- Collaborated through feature branches and pull requests, resolved merge conflicts, tested authenticated routes in Postman, and presented a live product demonstration.

WiFi Hotspot Billing System | Backend and Payments

Python, Flask, Flask-RESTful, SQLAlchemy, Flask-Migrate, M-Pesa integration

- Developed backend resources for hotspot packages, clients, transactions, sessions, vouchers, routers, devices, reconnect actions, and administrative operations.
- Implemented idempotent pending-transaction creation and callback-driven payment status updates using checkout request identifiers and terminal-state protection.
- Designed payment status responses containing receipt, amount, payment time, phone, and package details for reliable frontend polling and status synchronization.
- Refactored route files toward Flask-RESTful conventions and maintained clean imports after reorganizing routes and models into an application package.

Productivity Notes Application | Secure Notes API

Flask, JWT, SQLAlchemy, React integration

- Built user registration, login, protected session checks, password hashing, and JWT-based authorization.
- Implemented user-owned note CRUD with categories, pinned status, and paginated retrieval; diagnosed and resolved cross-origin integration issues.

ADDITIONAL PROJECTS

Inventory Management REST API and CLI

Built CRUD endpoints for products with validation and error handling; created an argparse-based command-line client; integrated OpenFoodFacts product lookup/import; wrote route, CLI, and mocked external-API tests with pytest.

Workout Tracker API

Modelled exercises, workouts, and workout-exercise relationships with SQLAlchemy; implemented schemas, seeded relational data, CRUD endpoints, joins, uniqueness rules, and cascade deletion.

Next.js Login and Voucher Interface

Created reusable UI components, form validation, loading and success states, redirects, and voucher recharge interactions; verified behavior with Vitest, React Testing Library, and fake timers, and prepared the project for a GitHub-connected Vercel workflow.

SOFTWARE ENGINEERING TRAINING

Software Engineering Certificate

Moringa School | September 2026

- Completed practical training in full-stack web development covering frontend engineering, backend API development, databases, testing, version control, and collaborative project delivery.
- Applied agile-style teamwork through scoped feature ownership, GitHub pull requests, code integration, API testing, troubleshooting, and technical presentations.

ENGINEERING STRENGTHS

- Breaks features into small, testable implementation steps and verifies behavior before integration.
- Translates product requirements into database models, API contracts, validation rules, and user-facing workflows.
- Troubleshoots frontend rendering, authentication, imports, migrations, CORS, API responses, and Git conflicts methodically.
- Communicates clearly in team projects, incorporates review feedback, and documents changes through focused commits and pull requests.

PROFESSIONAL INTERESTS

Fintech and digital payment solutions; REST API engineering; secure, database-backed applications; practical full-stack products; frontend usability; automated testing; cloud deployment; and continuous software engineering learning.
